

ENVIRONMENTAL POLICY

Tidningsbararna shall contribute to a sustainable society. Our environmental work is based on a comprehensive view, continual improvements and a personal engagement.

COMPREHENSIVE VIEW.

Our activity has in all elements a direct or indirect impact on the environment and for that reason we apply a comprehensive view on the environmental issues of the company. We prevent, monitor and take responsibility for our environmental impact from suppliers and to the customers.

CONTINUAL ENVIRONMENTAL IMPROVEMENTS.

We see our environmental work as a continuous ongoing process. For this reason we monitor available research and development in the industry of vehicles in order to be able to choose vehicles with less impact on the environment than others. By developing better planning tools we shall render the logistics more effective on transports and distribution to subscribers, with decreasing environmental impact as a result. To comply with applicable legal requirements is the minimum level for our environmental responsibility.

PERSONAL ENGAGEMENT.

By educating and informing our employees in environmental work we will create a workplace with possibilities to take care of the employees´ personal commitment, knowledge and initiative.

Our environmental management system shall be a guidance how we in an active way will work with our environmental impact and our environmental targets.

Through a dialogue with our customers, partners and suppliers we will communicate our environmental work and in that way make more eco-friendly purchase and offer environmental alternatives to our customers.
